

ABSTRACT

A wire rewinding box with a recharge unit, including a casing, a windlass, a coil spring, a communication wire, a recharge unit and a press handle. Inside the casing is the formation of an accommodating chamber. The windlass is installed in the accommodating chamber. The coil spring is installed between the casing and the windlass. The communication wire is wound on the windlass. The recharge unit is installed inside the casing, consisting of a gear mechanism, a generator and a battery. The press handle is installed at one side of the casing. The gear mechanism is installed between the windlass, the press handle and the generator.
